Stacks and Queues

1.	Show the state of the <i>stack</i> after the following operations, be sure to indicate the final <i>top</i> pointer location
	a) $\operatorname{push}(3)$, $\operatorname{push}(2)$, $\operatorname{push}(1)$
	b) push(3), push(2), push(1), pop() , push(4) , pop() , pop() , push(5)
2.	Show the state of the $queue$ after the following operations, be sure to indicate the final $head$ and $tail$ pointer locations
	${\rm a)}{\rm enqueue}(3),{\rm enqueue}(2),{\rm enqueue}(1)$
	b) enqueue(3), enqueue(2), enqueue(1), dequeue(), enqueue(4), dequeue(), enqueue(5), dequeue()
3.	List one advantage and one disadvantage of using a <i>preallocated</i> , i.e. fixed size, backing array to implement a stack.
